NeoGCP g7 FIRE

User's Guide

(Rev. F)

ICD **ICD CO.,LTD**

C A U T I O N

1. It is recommended to use RPM measurement method as MPU to prevent start motor damage when using Doosan engine.

2. If RPM measurement method is frequency, oil pressure switch is set to not use, and voltage is not generated at engine CRANK-ON, the start motor may be damaged.

■ MPU Method Setup

Menu	Setup
TEETH(FACTOR)	1. Select [SYSTEM] then [ENTER] on Menu screen. 2. Press [▼] 2 times, [▶] 2 times, select [TEETH(FACTOR)], then press [ENTER]. 3. Input Teeth number, then press [ENTER].
RUN-STATE OP-SWITCH Use / Not use	1. Select [CONTROL] then [ENTER] on Menu screen. 2. Press [▼] 3 times, [▶] 2 times, select [OIL PRESS SENSOR] then [ENTER]. 3. Select [Use] then press [ENTER].
RUN-STATE OP-GAUGE	1. Select [CONTROL] then [ENTER] on Menu screen. 2. Press [▼] 3 times, [▶] 1 time, select [RUN-STATE OP-GAUGE] then setup oil pressure.

※ 6.5 Refer to Crank ON/OFF

■ Doosan Engine Gear Teeth

Gear Teeth	Doosan Engine Model
129	DB33, PO34TI, DB58
140	D1146, D1146T
146	PO86TI
152	P126TI-3, P126TI, P126TI-II
160	P158LE-III, P158LE, P158LE-1, P158LE-2, P180LE-II, P158LE, P222LE-1, P222LE, P222LE-II, P222FE-II

※ Information above written in request of Doosan Commercial Engine(DSCE).

Start motor ON/OFF record stored in ALARM HISTORY.

If start motor is damaged due to ignoring above caution, free A/S from DSCE will NOT be possible even within warranty period.

- This manual can be applied to NeoGCP g7 FIRE Ver. 5.18 and up.

- Contact us for old version manuals.

- 3 -

Firmware Version	Application Manual Version	Changes
5.09a	Rev. A	- Manual for NeoGCP g7 FIRE - Added ECU alarm - Added ECU OFF function in FIAT engine standby status
5.10	Rev. B	- Added ECU related Modbus address (69~79)
5.13	Rev. C	- In the [ECU TYPE] menu, changed the name of the Baudouin engine to the CPU name.
5.14c	Rev. D	- Added WISE10B solenoid off (S-OFF) in Baudouin engine
5.16	Rev. E	- Added Volvo engine EDC4 and Rolls-Royce engine ECU8,9
5.18~	Rev. F	- CRANK ON CHECK TIME is fixed at 5 sec -> added settings - OVR(INSTANT) is fixed at 130% -> added settings - SVR DELAY renamed(SVR CHECK TIME) and path moved(CONTROL -> PRPOTECTION)

Table of Contents

REV. F

ICD CO.,LTD

1. Introduction

1.1. NeoGCP g7 FIRE

- Neo Generator Control Panel g7 FIRE (NeoGCP g7 FIRE) is a digital type controller with a Firefighting

  Power Preservation function and uses a microprocessor for single-operating generators.

1.2. Special Features

- Easy and simple to set generator with 192 × 64 graphic LCD display.

- Built-in OVR, UVR, OCR, OCGR functions.

- Fast, accurate voltage and current measurement with a tolerance of 1% possible.

- [BLOCK], [MANUAL], [AUTO], [FIRE-RUN] operation possible, REAL-TIME function also lets

   [SCHEDULED-RUN] possible.

- Engine and fuselage protection operation in 7 levels.

- Save and view up to 30 faults.

- CAN communication converter is built-in, and engine control of various ECU types is possible.

- Built-in RS485 Comm port, supports Modbus Protocol 04h, 05h.

- 10 Digital Input, 8 Digital Output setup possible.

1.3. Product Image

〈 NeoGCP g7 FIRE front image 〉
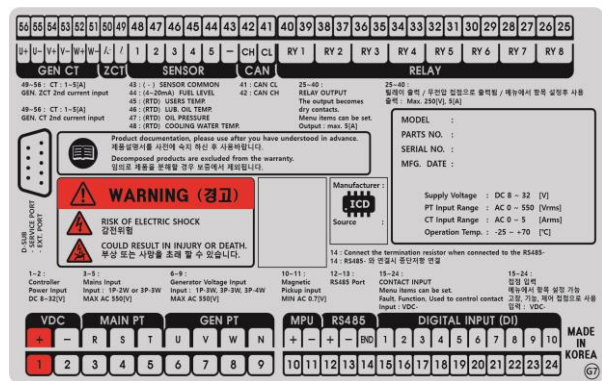

〈 NeoGCP g7 FIRE back image〉

1.4. Specification

Size (mm)	240(L)×178(W)×53.5(H)	Operating Temperature	−20 ~ 70 ℃
Weight	Approx 862 g	CT Input range	0 ~ 5 [A]
Controller power	8 ~ 32 Vdc	Generator power	Max AC 550 [Vrms]
Max power	4.8 W	Mains Sensing Method	Single-phase, 3phase, UVR Contact

REV. F

2. Button usage and LED Lighting Status

2.1. Button usage

‑ Adjustment and setup of various operation information possible with buttons on the front.

ITEM	DESCRIPTION	
DIRECTION BUTTON	‑ Use to select generator information on Main screen. ‑ Use to move Menu on Menu screen. ‑ Use to move digits or change information on Menu screen.	
MODE	‑ Use to switch to [BLOCK], [MANUAL], [AUTO] mode.	
MENU	‑ Use to switch from Main screen to Menu screen.	
ENTER	‑ Use to select menu from Menu screen. ‑ Use to input generator information on Menu screen.	
ESC	‑ Use to switch from Menu screen to Main screen. ‑ Use to cancel changes of generator information on Menu screen. ‑ Use to switch from Alarm check screen to Main screen without release of Alarm.	
LAMP TEST	‑ Use to check LED on Main screen.	
ALARM	‑ Use to switch to Alarm check screen when Alarm occurs. ‑ Use to check Alarms in a sequential order when many Alarms occur.	
RESET	‑ Use to release Alarm	
CLOSE	‑ Use to close breaker in [MANUAL] mode.	
OPEN	‑ Use to open breaker in [MANUAL] mode.	
START	‑ Use to start generator in [MANUAL] mode.	
STOP	‑ Use to stop generator in [MANUAL] mode.	

2.2. LED Lighting Status

‑ LED indicates status of various operation and faults, whether breaker is open or closed.

ITEM	COLOR	DESCRIPTION
BLOCK	Yellow	Lit in [BLOCK] mode
MANUAL	Yellow	Lit in [MANUAL] mode
AUTO	Yellow	Lit in [AUTO] mode
GRID ON	Red	Lit in Mains on, off in Mains off
ALARM	Red	Lit in Alarm condition, off when Alarm is released
CLOSE	Red	Lit in breaker [CLOSE], off in breaker [OPEN]
OPEN	Green	Lit in breaker [OPEN], off in breaker [CLOSE]
START	Yellow	Flashing in [START], off in [STOP]
CAN	Red	Flashing in communication with ECU
FIRE	Red	Lit in Fire Figthing Preservation state

      REV. F

3. LCD Display Status

3.1. Start Screen

- When power is on, start screen will show product number and program version.

〈 Start screen 〉

3.2. Main Screen

- When program booting is completed from Start screen, it will switch to Main screen.

- Main screen displays main information of Gen-set.

- Main screen displays 4 lines which are as shown below.

Seq	Description
1st Line	Operation Mode, Sequence Status, Sequence Timer
2nd & 3rd Line	Information on screen are changeable with [◀], [▶] buttons - Active power(kW), Gen-set voltage[V], Gen-set current[A], Power factor - Active power(kW, %), Gen-set voltage[V], Gen-set current[A]
4th Line	Information on screen changeable with [◀], [▶] buttons - Current date and time - Mains voltage[V] - Gen-set voltage[V] - Gen-set phase voltage[V] - Gen-set current[A] - Ground current[A] - Apparent power[kVA], Reactive power[kvar], Power factor - Coolant temp[℃], Oil press[bar] - Oil temp[℃], User temp[℃], Fuel level [%] - Running hour[h] - Integrating wattmeter[kWh]
5th Line	DI-CONFIG 01~10, DO-CONFIG 1~8, BUS or UVR signal timer (BUS or UVR signal timer will only output in [AUTO] mode)

3.2.1. 1st Line

- 1st line of Main screen displays Operation Status, Sequence Status, and Sequence Timer.

〈 Operation status, Sequence status, and Sequence timer 〉

REV. F
3.2.2. 3rd Line

- Information on 2nd line changeable with [▶], [◀] buttons on Main screen.

```

3.3. Alarm Screen

3.3.1. Alarm check

– In case of alarm condition, screen will automatically switch to Alarm screen.

– Number on the right of [ALARM MESSAGE] indicates number of times alarm has occurred.

– When multiple alarm occurs, press [ALARM] button to check contents of alarm in a sequence.

```
〈 ALARM MESSAGE :  1 〉
─────────────────────────
EXT. MODULE ALARM
```
〈 Alarm screen 〉

3.3.2. Alarm release

– After alarm condition is resolved, press [RESET] button to release alarm.

– If [ALARM] is pressed without solving alarm condition, Main screen will be displayed.

3.4. Menu Select Screen

– Press [MENU] button on main screen and it will switch to Menu select screen.

– Press [▲], [▼] buttons on main screen to select desired item then press [ENTER] button to move to Menu select screen.

```
[MENU]                          [MENU]

SENSOR-SET    :0500[kW]
DI-CONFIG
DO-CONFIG     !P  F  V  I  GRI  WIRE  EX
```
〈 Menu setting screen 〉

- Press [◄], [►] and [▲], [▼] buttons on Menu screen to select desired item and press [ENTER]

  button.

- Then press [▲], [▼] buttons to modify main information of Gen-set.

4. NeoGCP g7 FIRE Cable Specification and Size

4.1. NeoGCP g7 FIRE Cable Specification

- All input and output of NeoGCP g7 FIRE implemented by pluggable terminal block.

〈 Pluggable Terminal Block 〉

- Cable specification as shown below, separation of low-current cables and high-current cables

  recommended to prevent noise.

Cable Thickness	0.34 ~ 2.5 mm^2
Solid Cable (AWG)	12 ~ 24
Stranded Cable (AWG)	12 ~ 24
Screw Size	M3
Pin Terminal Length	6 ~ 7 mm

4.2. Mounting Hole Size of NeoGCP g7 FIRE

27		
26	DO 8 SET	
25		

5.1. Number [1], Number [2] Vdc ±

- Number [1] and [2] ports supply power to 8~32 [Vdc].

- When power is supplied, there is a possibility of an inrush current depending on impedance of power supply.

- To prevent damage from inrush current, overcurrent protection device such as a fuse or breaker is recommended to be connected in series with power cable.
〈 Power supply overcurrent protection example 〉

5.2. Number [3] ~ Number [5] MAIN R, S, T

- Detect Mains voltage by Numbers [3] ~ [5] ports.

- Detect Mains voltage in [AUTO] mode and gen-set starts or stops after set delay time.

- Use [MENU]→[CONTROL]→[MAINS SENSING] only when set as [MAIN R-S-T] or [R-S Voltage],

   not to be used when set as [UVR SIGNAL].

- [UVR SIGNAL] can be used as corresponding contact after changing setup of contact to

   [UVR SIGNAL] in [MENU]→[DI-CONFIG].

Menus that are influenced	Set value	Description
[CONTROL] → [MAINS SENSING]	[MAIN R-S-T]	Numbers [3], [4], [5]
	[MAIN R-S]	Numbers [3], [4]
	[UVR SIGNAL]	User Set DI Port
[CONTROL] → [MAINS SENSING] → [AUTO-START DELAY]	0 ~ 7200 [s]	[AUTO] Run Delay Time
[CONTROL] → [MAINS SENSING] → [AUTO-START VOLTAGE]	0 ~ 6600 [Vac]	[AUTO] Run Voltage
[CONTROL] → [MAINS SENSING] → [AUTO-STOP DELAY]	0 ~ 7200 [s]	[AUTO] Stop Delay Time
[CONTROL] → [MAINS SENSING] → [AUTO-STOP VOLTAGE]	0 ~ 6600 [Vac]	[AUTO] Stop Voltage
〈 Mains voltage detection wiring example 〉

5.3. Number [6] ~ Number [9] GEN PT U, V, W, N

- Detects generator voltage of Max AC 550 [Vrms] by Numbers [6] ~ [9] ports.

- Wiring should be as follows.

  1P-2W : L1-6, N-7 / 1P-3W : L1-6, N-7, L2-8 / 3P-3W : U-6, V-7, W-8 / 3P-4W : U-6, V-7, W-8, N-9

- If generator voltage exceeds AC 550 [Vrms], user should use PT (Potential Transformer) and 2nd Voltage should not exceed AC 550 [Vrms].

Menus that are influenced	Set value	Description
[SYSTEM] → [VOLTAGE]	110 ~ 6600	PT 1st voltage input
[SYSTEM] → [PT RATIO]	1 ~ 99.99	PT Ratio for user setup
⟨ GEN PT Wiring example ⟩

5.4. Number [10], Number [11] MPU ±

- Detects magnetic pickup sensor input of Min 0.7 [Vac] by numbers [10] and [11] ports.

- If [MENU]→[SYSTEM]→[ENGINE RPM]→[TEETH(FACTOR)] is set as 30, RPM measurement will be in Frequency and do not use MPU.

Menus that are influenced	Set Value	Description
[SYSTEM] → [ENGINE RPM] → [TEETH(FACTOR)]	31 ~ 250	RPM measurement in MPU
	30, 20(6pole)	RPM measurement in Voltage

5.5. Number [12] ~ Number [14] RS485 ±

- Sensing of RS485 ± through number [12] and [13] ports.

- Connect ports [13] and [14], then terminal resistance 120 [Ω] will be connected.

5.6. Number [15] ~ Number [24] DI-CONFIG

- When Vdc‐ is input through ports [15] ‐ [24], corresponding signal will be as shown below.

- For details of DI, refer to [DI 09 SET].
〈 DI Wiring Diagram 〉

5.7. Number [25] ~ Number [40] DO-CONFIG

- Output signal set by user will transmit through ports [25] ~ [40].

- Capacity of RELAY 1 ~ RELAY 8 is 250[Vac], 24[Vdc], MAX 5[A].

- When using external relay, please consider relay capacity.

- For details of DO, refer to [DO 10 Set].
〈 DO Wiring Pattern Diagram 〉

5.8. Number [41] ~ Number [42] CAN ±

- Sensing of CAN ± through number [41] and [43] ports.

- Connect ports [13] and [14], then terminal resistance 120 [Ω] will be connected.

5.9. Number [43] ~ Number [48] Sensor Input

- Common of sensors will be input by port [43].

- Fuel level sensor of 4~20 [mA] will be input by port [44].

- User temp sensor will be input by port [45].

- RTD type Oil sensor will be input by port [46].

- RTD type Oil press sensor will be input by port [47].

- RTD type Coolant temp sensor will be input by port [48].

REV. F

5.10. Number [49], Number [50] GEN ZCT K, L

- Detects Ground Current by ports [47], [48].

- Measurable minimum current 0.01 [Arms], maximum current 10 [Arms], and peak time 1 [s].

- Change of setup needed according to type of ZCT (Video current transformer : Zero Current

  Transformer).

Menu	Set Value	Description
[SYSTEM] → [PT RATIO] → [GR CT RATIO]	User setup	Ground Current sensing

5.11. Number [51] ~ Number [56] GEN CT U+,U-, V+,V-, W+,W-

- Detects current by ports [51] ~ [56].

- Wiring should be as follows.

     1P-2W : U+(56),U-(55)

     1P-3W : U+(56), U-(55), V+(54), V-(53)

   3P-3W or 3P-4W : U+(56), U-(55), V+(54), V-(53), W+(52), W-(51)

- Measurable minimum current 0.01 [Arms], maximum current 10 [Arms], and peak time 1 [s].

- Change of setup needed according to the CT (Current Transformer) of user.

Menu	Set Value	Port used
[SYSTEM] → [PT RATIO] → [CT RATIO]	User setup	Gen-set current sensing

⟨ CT Wiring Example ⟩

Cooldown	Non Applicable	Impossible	Possible	Possible
Change Parameter	Possible	Partly Possible	Partly Possible	Partly Possible
Fault History Delete	Possible	Impossible	Impossible	Impossible
MODBUS Comm	Possible	Possible	Possible	Possible

6.2. Operation Order

- Sequence of generator operation as shown below.

Order	Item	Description
1	[READY]	Ready to run
2	[PRE-CRANK]	When [PRE-CRANK TIME] is set, DO-CONFIG [C_PRE-CRANK] will output
3	[CRANK-ON]	Start
4	[CRANK-OFF]	In case of start failure, standby until next start
5	[IDLE RUN]	IDLE run
6	[BUILD-UP]	Voltage, Frequency, and RPM waiting time to fall within rated range
7	[RUNNING]	Nominal run status, Load run possible
8	[COOLDOWN]	Cool down
9	[STOP]	Stop

6.3. Ready

- In order to be in [READY] status to start Gen-set, following 3 conditions must meet.

- If following conditions do not meet, status will switch to [CHECK] mode and,

  [C_CRANK] will not output.

- If status is [CHECK] in [AUTO] mode, [F_FAIL TO STOP] Alarm situation will occur.

Conditions	Menus that are influenced	Description
RPM	–	Should be 0 [RPM]
Oil Press Sensor	[CONTROL] → [RUN-STATE OP-GAUGE]	[0] and up: lower than set value [0] : No check
Oil Press switch	[CONTROL] → [[RUN-STATE OP-SWITCH]	[USE] : Should be Oil Press Low [NOT USE] :No check

6.4. PRE-CRANK

- When Gen-set start signal is [READY], [C_PRE- CRANK] will output and then status will switch to [PRE-CRANK].

- If [PRE-CRANK TIME] reaches 0, status will switch to [CRANK-ON] after Gen-set start signal input.

Menus that are influenced	Setup	Description
[CONTROL] → [PRE-CRANK TIME]	0 ~ 60 [s]	[C_PRE-CRANK] will output during set time

6.5. CRANK ON/OFF

- [C_CRANK] will output to run Gen-set.

- If one of the conditions such as [RUN-STATE RPM], [RUN-STATE OP-GAUGE], [RUN-STATE OP-SWITCH] meet, status will switch to [IDLE RUNNING].

- If 3 conditions do not meet, status will switch to [STOP] in [MANUAL] mode and in [AUTO] or [FIRE] mode, Gen-set will start for a set number of times and then [FAIL TO START] alarm situation will occur.

- If [TEETH(FACTOR)] is 30, separate [CRANK-CHECK] time will countdown for set time after [CRANK-ON] and then will check Run-state.

Item	Menus that are influenced	Description
Run-State	[CONTROL] → [RUN-STATE RPM]	Should be higher than set value
	[CONTROL] → [RUN-STATE OP-GAUGE]	[0] and up: higher than set value [0] : No check
	[CONTROL] → [RUN-STATE OP-SWITCH]	[USE] : Should not be low oil pressure status [NOT USE] :No check
Crank Attempts	[CONTROL] → [CRANK-ON TIME]	[C_CRANK] output time
	[CONTROL] → [CRANK ON CHECK TIME]	Crank-on checking time during set time if [TEETH(FACTOR)] is 30
	[CONTROL] → [CRANK-OFF TIME]	Delay time until next crank
	[CONTROL] → [CRANK ATTEMPTS]	Number of cranking repeat in [AUTO] mode

6.6. IDLE RUNNING

- If [IDLE STATUS] is being input or [IDLE TIME] is set, status will switch to [IDLE RUNNING].

- If [IDLE STATUS] is not being input, or [IDLE TIME] is 0, status will switch to [BUILD-UP].

- [C_IDLE SPEED] will output even during [CRANK-ON], [CRANK-CHECK].

Menus that are influenced	Setup	Description
[DI-CONFIG] → [IDLE STATUS]	USE	[C_IDLE SPEED] during [IDLE STATUS]
[CONTROL] → [IDLE TIME]	0 ~ 60 [s]	[IDLE RUNNING] until set time

6.7. BUILD-UP

- Check to see if RPM, Frequency and Voltage have reached the nominal range of user set value.

- If 3 conditions meet, status will switch to [RUNNING]

- If Gen-set check is not completed within [BUILD-UP TIME], [FAIL TO BUILD-UP] ALARM will

    output.

Menus that are influenced	Setup	Description
[CONTROL] → [BUILD-UP TIME]	5 ~ 600 [s]	Build-up checking time during set time
[PROTECTION] → [OVER SPEED], [UNDER SPEED]	User setup	RPM check of user set range
[PROTECTION] → [OVER FREQUENCY], [UNDER FREQUENCY]	User setup	Frequency check of user set range
[PROTECTION] → [OVER VOLTAGE], [UNDER VOLTAGE]	User setup	Voltage check of user set range

6.8. RUNNING

- If breaker trip situation does not occur, breaker can open/close automatically or manually

    according to user set value.

- If Gen-set stop signal is input in [AUTO] and [MANUAL] mode, status will switch to [COOLDOWN].

- If stopped during [MANUAL] operation, engine will stop after Cool Down process. To stop

    immediately, press the [STOP] button twice.

6.9. COOLDOWN

- Operates in [AUTO] and [Manual] mode.

- No-load run during [COOLDOWN TIME] and then status will switch to [STOP].

- Press the stop button twice in [MANUAL] mode, it will stop immediately.

- [C_BREAKER OPEN] will output.

- If Gen-set start signal is input, status will switch to [RUNNING].

REV. F

Menus that are influenced	Setup	Description
[CONTROL] → [COOLDOWN]	0 ~ 600 [s]	[COOLDOWN] during set time

6.10. STOP

- [STOP], then switch to [READY].

- Check of stop status when using [PROTECTION] → [FAIL TO STOP].

- If RPM, Oil press sensor, Oil press switch are not in stop status until [STOP-HOLD TIME] reaches 0, [F_FAIL TO STOP] Alarm will output.

Item	Menus that are influenced	Description
Stop Failure	[PROTECTION] → [FAIL TO STOP]	Setup Use/Not use
RPM	-	Should be 0 [RPM]
Oil Press Sensor	[CONTROL] → [RUN-STATE OP-GAUGE]	[0] and up: lower than set value [0] : No check
Oil Press Switch	[CONTROL] → [RUN-STATE OP-SWITCH]	[USE] : Should be Oil Press Low [NOT USE] : No check

6.11. MANUAL

- [START], [STOP], [BREAKER CLOSE], [BREAKER OPEN] can be controlled manually.

- [COOLDOWN TIME] will be applied. If the [STOP] button is pressed during Cool Down process, it stops immediately without cooling.

- [MANUAL] will be displayed on LCD and [MANUAL] LED will be lit.

- If Breaker type is ACB, running sequence is as shown below.

Order	Button	Description
1	[MODE]	Switch to [MANUAL] mode
2	[START]	Gen-set run
3	[BREAKER CLOSE]	Breaker Close → Load Run
4	[BREAKER OPEN]	Breaker Open → No-load Run
5	[STOP]	Gen-set Stop

6.12. AUTO

- Controls generator automatically, and [START], [STOP], [BREAKER CLOSE], [BREAKER OPEN] buttons will not activate.

- [AUTO] will be displayed on LCD and [AUTO] LED will be lit.

- If breaker type is ACB, refer to following example on the next page for general operation procedure.

6.13. FIRE

- When [FIRE-RUN] is implemented, status will switch to [FIRE] mode and operation status will be same as [AUTO] mode.
- [FIRE] will be displayed on LCD and [AUTO], [MANUAL] LED will be lit.
- If [FIRE-RUN] is not input or [EM'CY STOP] is input or Shutdown Alarm occurs, Gen-set will stop and status will switch to the mode setup before [FIRE].

Menus that are influenced	Setup	Description
[DI-CONFIG] → [EM'CY STOP]	User setup	[EM'CY STOP] input

6.14. SCHEDULED-RUN

- Will not activate if [SCHEDULED-RUN START] time is set after [SCHEDULED-RUN STOP] time, or if [SCHEDULED-RUN START] time is set same as [SCHEDULED-RUN STOP] time.
- Scheduled run only activates in [AUTO] mode.
- If Mains Off is input during scheduled-run, status will automatically switch to [AUTO] mode.

Menus that are influenced	Setup	Description
[CONTROL] → [SCHEDULED-RUN]	User setup	User setup related to scheduled-run

REV. F

⟨ [AUTO] Mode Sequence Setup Example ⟩

REV. F

7. SYSTEM

- Setup of basic information to run Gen-set.

- Setup is possible in the stop state. (Some menus excluded)

Menu		Description	Setup
POWER	P	Input rated kW of GEN-SET	0 ~ 5000 [kW]
FREQUENCY	F	Input Rated Frequency of GEN-SET	40 ~ 60 [Hz]
VOLTAGE	V	Input Rated Voltage of GEN-SET	110 ~ 6600 [V]
CURRENT	I	Input Rated Current of GEN-SET	5 ~ 9999 [A]
GR CURRENT	GRI	Input Ground Current of GEN-SET	5 ~ 9999 [A]
GEN WIRING	WIRE	Select Generator Wiring Type	1P-2W / 1P-3W / 3PHASE
EXT-MODULE	EX	EXT-Module Use/ Not use	Not use / EM20 / EP20
ECU TYPE	ECU	Setup ECU Type	Refer to [7.8] ECU TYPE
PT RATIO	PT	Input PT Ratio	1.00 ~ 99.99
CT RATIO	CT	Input CT Ratio	5/1 ~ 9999/5
GR CT RATIO	ZCT	Input ZCT Ratio	5/1 ~ 9999/5
ENGINE RPM	RPM	Input RPM of GEN-SET	0 ~ 4000
GOVERNOR TYPE	GOV	Input Governor Type	Fuel / Stop
TEETH(FACTOR)	TEETH	Input Engine Gear Teeth	0 ~ 250
BREAKER TYPE	TYPE	Setup Breaker Type	MCCB / ACB / MC
BREAKER AUX CHECK	AUX	Setup Breaker Auxiliary contact	Use / Not use
ACB CLOSE DELAY	CLOSE	Close contact output after set time	0 ~ 60 [s]
ACB OPEN DELAY	OPEN	Open contact output after set time	0 ~ 60 [s]
BUTTON BEEP	BEEP	Setup Button Sound	Use / Not use
ALARM HORN TIME	HORN	Setup Alarm Sound Output Time	0 ~ 600 [s]
BACK-LIGHT TIME	LIGHT	Setup Back-light Holding Time	0 ~ 600 [s]
DATE SETUP	DATE	Setup Present Date	-
TIME SETUP	TIME	Setup Present Time	00:00 ~ 23:59
TIME COMPENSATION	CLOCK	Adjust Clock	-31 ~ +31
PASSWORD	PASS.	Password to enter the menu	0 ~ 9999 (Password released when 0)

7.1. POWER (P)

- Setup rated output of Gen-set.

- Setup : 0 ~ 5000 [kW]

7.2. FREQUENCY (F)

- Setup frequency of Gen-set.

- Setup : 40 ~ 60 [Hz]

7.3. VOLTAGE (V)

- Setup rated voltage(line voltage) of Gen-set.

- Setup : 110 ~ 6600 [V]

7.4. CURRENT (I)

- Setup rated current of Gen-set.

- Setup : 5 ~ 9999 [A]

Rated Current Formula
Rated Current[A] = Rated Output[kW] × 1000 ÷ {Rated Voltage[V] × 1.732 × Power Factor(cosθ)}

7.5. GR CURRENT (GRI)

- Setup ground current of Gen-set.

- Setup : 5 ~ 9999 [A]

7.6. GEN WIRING (WIRE)

- Select wiring type of Gen-set.

- Setup : 1P-2W, 1P-3W, 3PHASE

- Wiring differs according to wiring type of Generator.

7.7. EXT-MODULE (EX)

- Select use / not use of EXT-MODULE.

- Setup : Not use, EM20, EP20

- Purchase of additional I/O ports is possible for EXT-MODULE.

- When using Extension module(EM20, EP20), number of additional setup will increase.

- Refer to Extension module(EM20, EP20) manual for details.

Setup	Menus that are influenced	Description
Not use	[DI-CONFIG]	[DI 01 SET] ~ [DI 10 SET]
	[DO-CONFIG]	[DO 01 SET] ~ [DO 08 SET]
EM20	[DI-CONFIG]	[DI 01 SET] ~ [DI 18 SET]
	[DO-CONFIG]	[DO 01 SET] ~ [DO 16 SET]
EP20	[DI-CONFIG]	[DI 01 SET] ~ [DI 18 SET]
	[DO-CONFIG]	[DO 01 SET] ~ [DO 72 SET]
	[SENSOR-SET]	[Ext. Sensor 1 ~ 8] Use/ Not use [Ext. Sensor 1 ~ 8] Data
	[PROTECTION]	[Ext. Sensor 1 ~ 8] Alarm setup
	EP20-1~8	EXT-MODULE can be expanded up to 8

REV. F

7.8. ECU TYPE (ECU)

- Select : Not use, EMSS6, EDC7C1, EDC17CV41, WISE15, WISE15(A/H), WISE10B, EMSS2, DN03, EDC7C1 OFF, WISE10B S-OFF, EDC4, ECU8,9 Rolls-Royce

- When using ECU TYPE, previous setup value will be adjusted to relevant ECU.

- If separate setup is needed, setup ECU TYPE first then change user setup.

Menus that will change when using EMSS6		After changes
[SENSOR-SET]	[COOLANT TEMP SENSOR]	Not use
	[OIL PRESS SENSOR]	Not use
	[OIL TEMP SENSOR]	Not use
	[USER TEMP SENSOR]	Not use
	[FUEL LEVEL SENSOR]	Not use
	[EXT-MODULE SENSOR 1~8]	Not use
[CONTROL]	[IDLE TIME]	5 [s]
	[CRANK OFF TIME]	15 [s]
	[CRANK ON TIME]	15 [s]
[PROTECTION]	[OIL PRESS LOW]	2.7 [bar]
	[COOLANT TEMP HIGH]	103 [℃]

Menus that will change when using EDC7C1		After changes
[SENSOR-SET]	[COOLANT TEMP SENSOR]	Not use
	[OIL PRESS SENSOR]	Not use
	[OIL TEMP SENSOR]	Not use
	[USER TEMP SENSOR]	Not use
	[FUEL LEVEL SENSOR]	Not use
	[EXT-MODULE SENSOR 1~8]	Not use
[CONTROL]	[IDLE TIME]	5 [s]
	[CRANK OFF TIME]	15 [s]
	[AUTO STOP DELAY]	10 [s]
[PROTECTION]	[OIL PRESS LOW]	0.5 [bar]
	[COOLANT TEMP HIGH]	103 [℃]
	[OIL TEMP HIGH]	103 [℃]

7.8.1. When [EDC7C1 OFF] is set:

- [C_GOVERNOR] is not output in the Ready to run status, and ECU communication alarm does not occur.

- If Gen-set start signal is input, [C_GOVERNOR] is output during [PRE-CRANK TIME], the ECU power is turned on, and gen-set is Ready to run status.

- If gen-set is stopped, [C_GOVERNOR] output disappears and communication alarm does not occur until it is [CRANK-ON] again.

REV. F

7.9. PT RATIO (PT)

- Setup PT (Potential Transformer) Ratio.

- Setup : 1 ~ 99.99

- If Gen-set rated voltage exceeds AC 550 [Vrms], PT must be used.

- Ex) When 1st PT voltage (Gen-set voltage) is 6600 [V], and when PT 2nd voltage (Input voltage) is 110 [V].

Menus that are influenced	Setup
[SYSTEM] → [VOLTAGE]	6600 [V]
[SYSTEM] → [PT RATIO]	60.0 (= 6600/110)

7.10. CT RATIO (CT)

- Setup CT (Current Transformer) Ratio.

- Setup : 5/5 ~ 9999/5 [A]

7.11. GR CT RATIO (ZCT)

- Setup ZCT (Zero Current Transformer) Ratio.

- Setup : 5/5 ~ 9999/5 [A]

7.12. RPM (RPM)

- Setup Gen-set RPM.

- Setup : 0 ~ 4000 [RPM]

7.13. GOVERNOR TYPE (GOV)

- Select type of Governor.

- Setup : FUEL, STOP

Menus that are influenced	Setup
[DO-CONFIG]	[C_GOVERNOR] port set by user

7.14. TEETH (FACTOR) (TEETH)

- Setup engine gear Teeth.

- Setup : 0 ~ 250

Set value	Description
31 ~ 250	Use MPU as RPM measurement type
20	Use voltage as RPM measurement type in 6-pole generator
30	Use voltage as RPM measurement type in 4-pole generator

7.15. BREAKER TYPE (TYPE)

- Setup type of Breaker

- Setup : MCCB, ACB, MC

7.15.1. ACB CLOSE DELAY (CLOSE)

- Setup delay time before ACB close after BUILT-UP is forming in [AUTO] mode.

- Setup : 0 ~ 60 [s]

7.15.2. ACB OPEN DELAY (OPEN)

- Setup delay time before ACB open after MAINS is forming in [AUTO] mode.

- Setup : 0 ~ 60 [s]

7.15.3. START FAIL TRIP SET (TRIP)

- Select use / not use of breaker signal in case of start failure.

- Setup : Use, Not use

7.16. BREAKER AUX CHECK (AUX)

- Select use / not use of breaker auxiliary contact.

- Setup : Use, Not use

7.17. BUTTON BEEP (BEEP)

- Setup use/ not use of button sound.

- Setup : Use, Not use

7.18. ALARM HORN TIME (HORN)

- Setup of internal buzzer and [C_ALARM BUZZER] output holding time when Alarm occurs.

- Setup : 0 ~ 600 [s]

- When setting is 0, internal buzzer and [C_ALARM BUZZER] will output until release of Alarm or

  until press of [ALARM] button.

Menus that are influenced	Setup
[DO-CONFIG]	Output holding time when [C_ALARM BUZZER] is used

REV. F

7.19. BACK-LIGHT TIME (LIGHT)

- Setup backlight holding time of LCD.

- Setup : 0 ~ 600 [s]

- Backlight will not go off when set as 0 or during running.

7.20. DATE SETUP (DATE)

- Setup present date.

- Setup : Year, month, date, day

7.21. TIME SETUP (TIME)

- Setup present time.

- Setup : 00:00 ~ 23:59

7.22. TIME COMPENSATION (CLOCK)

- Adjust when time goes faster or slower.

- Setup : -31 ~ +31

7.23. PASSWORD (PASSWORD)

- Setup the password to enter the menu. (If password is unused or set to 0, it can be entered

  without a password.)

- Setup : 0 ~ 9999

REV. F

8. fFS (Firefighting Power Preservation Control Setting)

8.1. fFS USE SET (USE)

- Setup use/ not use of a Firefighting Power Preservation function.

- Setup : Use, Not use

8.2. fFS MODE SET (SET)

- Firefighting operation starts when the settings of conditions below are satisfied.

    a. FIRE RUN DI : When the firefighting operation mode contact is input

    b. FIRE LOAD kW : When the summing of firefighting load(LV1) exceeds the setting value

    c. FIRE RUN DI + FIRE LOAD kW : When one of the conditions [a] and [b] is satisfied

    d. FIRE RUN DI & FIRE LOAD kW : When both conditions [a] and [b] are satisfied

8.3. fFS START RELAY SET (RLY)

- Select the designation of the start relay for Firefighting Preservation output.

- Setup : From RELAY 01 to RELAY 08(NeoGCP g7 FIRE) and from EP20-1 RELAY(01~08) to EP20-8 RELAY(01~08)

- When the start relay is designated and the number of firefighting output relays is set, it is automatically set as much as the number of output relays set from the start relay.

8.4. fFS RELAY COUNT SET (COUNT)

- Setup the number of the start relay for Firefighting output.

- Setup : 01~68

- When the number of Firefighting relays is set, the required number of EP20 units is automatically set.

- EP20 can be used from EP20-1 to EP20-8.

- The maximum number of Firefighting output relays is 68.

- If the EP20 model is not installed as set, an EP20 communication error occurs.

- When installing EP20, make sure not to overlap each setting from EP20-1 to EP20-8 in the menu.

- For EP20, a TTL to 485 converter must be purchased separately from ICD company and mounted on the service port(D-Sub).

8.5. fFS HOLD TIME SET (HOLD)

- Setup holding time of the Firefighting Preservation output relay.

- Setup : 0 ~ 600 [sec]

8.6. LOAD RUN (LV1)

- Setup the conditions for entering the Firefighting Preservation state.

- Setup : 0~100 [%] of rated output.

- Check time : 0 ~ 600 [sec]

8.7. LOAD CONTROL (LV2)

- Setup the sequential output point of the relay set for the Firefighting Preservation state.

- Setup : 0~100 [%] of rated output.

- Check time : 0 ~ 600 [sec]

8.8. LOAD CUT (LV3)

- Setup the simultaneous output point of the relay set for the Firefighting Preservation state.

- Setup : 0~100 [%] of rated output.

- Check time : 0 ~ 600 [sec]

8.9. FIRE RUN TEST

- This is a virtual mode to test the relay set for Firefighting Preservation output.

- To test, controller mode must be [BLOCK] mode.

- It operates only on the [FIRE RUN TEST] screen.

- Pressing the [ENTER] button creates a virtual voltage. At this time :

  when the [▶] button is pressed, the current increases by 10% of the rated current.

  when the [◀] button is pressed, the current decreases by 10% of the rated current.

- When the summing of firefighting load (LV1) is reached to setting value:

  LV1 (starting firefighting operation): fire extinguisher lamp turned on

  LV2 (sequential blocking of emergency power relay) : sequential blocking of Firefighting Preservation output relay [current blocking relay/total Firefighting output relay]

  LV3 (simultaneous blocking of emergency power relay): All Firefighting output relays are simultaneously blocked

- If the [ENTER] button is pressed during the firefighting test, the virtual voltage becomes 0 [V] and the test is initialized.

9. SENSOR-SET

- Setup Sensor information needed in Gen-set run.

- Setup possible in Stop mode. (Some menus excluded)

Menu		Description	Setup
COOLANT TEMP SENSOR	CT	Coolant temp sensor	Use, Not Use
OIL PRESS SENSOR	OP	Oil press sensor	Use, Not Use
OIL TEMP SENSOR	OT	Oil temp sensor	Use, Not Use
USER TEMP SENSOR	UT	User temp sensor	Use, Not Use
FUEL LEVEL SENSOR	FL	Fuel level sensor	Use, Not Use
COOLANT TEMP LV1~LV8	V1~V8	Setup temp according to resistance value of sensor	0~2000 [Ω] / 0~150℃
OIL PRESS LV1~LV8	V1~V8	Setup press according to resistance value of sensor	0~2000 [Ω] / 0.0~16.0 [bar]
OIL TEMP LV1~LV8	V1~V8	Setup temp according to resistance value of sensor	0~2000 [Ω] / 0~150℃
USER TEMP LV1~LV8	V1~V8	Setup temp according to resistance value of sensor	0~2000 [Ω] / 0~150℃
FUEL LEVEL GAIN	GAIN	Setup fuel level Gain	0.001 ~ 9.999
FUEL LEVEL OFFSET	OFFSET	Setup fuel level Offset	0 ~ 9999

9.1. Sensor Use / Not use

- Setup Coolant temp, Oil press, Oil temp, User temp, Use / Not use of fuel level sensor.

- Setup : Use, Not use

9.2. RTD Sensor Resistance Value and Output setup

- Setup output value of sensor according to RTD Sensor resistance value.

- Setup : Set output value according to V1 ~ V8

9.3. Fuel Level Gain and Offset

- 4~20 [mA] Set digital output value of fuel level sensor analog input value.

- Gain : 0.001 ~ 9.999

- Offset : 0 ~ 9999

9.4. When Using EP20

- When using EP20, press [▶] button to switch to Ext-Module sensor setup screen.

Menu	Description	Factory Sensor Data	Type
EXT-MODULE SENSOR 1	Not use, Coolant temp, Coolant temp LH, Coolant temp RH, Oil temp, User temp 1, User temp 2	DAEWOO Temp Sensor (Recommended use of temp sensor) (PT100 recommended in user temp setup)	Resistance type
EXT-MODULE SENSOR 2			
EXT-MODULE SENSOR 3			
EXT-MODULE SENSOR 4			
EXT-MODULE SENSOR 5	Not use, Oil press, Oil press LH, Oil press RH, User press 1, User press 2	VDO press sensor (Press Sensor recommended)	
EXT-MODULE SENSOR 6			
EXT-MODULE SENSOR 7	Not use, Fuel level, Coolant level	–	Current type
EXT-MODULE SENSOR 8			

- Keep pressing [▼] button to switch to Ext-Module sensor data screen from [SENSOR-SET] screen.

- Initial setup for [EXT-MODULE SENSOR 1] ~ [EXT-MODULE SENSOR 4] are data of temp sensor and [EXT-MODULE SENSOR 5] ~ [EXT-MODULE SENSOR 6] are data of press sensor.

- Check sensor type, sensor data and setup value before using.

- DAEWOO Temp Sensor Setup

REV. F

10. DI-CONFIG

- Digital Input(DI) Setup.

- When signal of user set type(N/O, N/C) is input, set message(TEXT) will output after set delay
  time(0.0 ~ 25.0) and then running mode of Gen-set will switch according to Alarm Level(7 level).

- Setup possible in stop state. (Some menus excluded)

Item	DI List (SET)	Description	TYPE	DELAY	ALARM
Fault Contact	USER FAULT	User fault contact	[N/O] [N/C]	0.0~25.0 [s]	Total 7 levels
	USER FAULT (RUN)	User fault contact (Running)			
	USER FAULT (STOP)	User fault contact (Stop)			
	EM'CY STOP S/W	Emergency stop			
	COOLANT TEMP S/W	Coolant temp switch			
	OIL PRESS S/W	Oil press switch			
	COOL. LEVEL S/W	Coolant level switch			
	NO CHARGING S/W	Charge failure			
	FAIL TO START	Start failure			
	FAIL TO STOP	Stop failure			
	BUILD-UP EXPIRE	Fail to Build-up			
	OVER SPEED	Over speed			
	OCGR	Ground over current			
Status Contact	BREAKER AUX	Breaker auxiliary		Impossible	Impossible
	UVR SIGNAL	UVR run			
	FIRE-RUN	Emergency run			
	BLOCK MODE	Block mode			
	MANUAL MODE	Manual mode			
	AUTO MODE	Auto mode			
	GEN START	Gen-set start			
	GEN STOP	Gen-set stop			
	BREAKER CLOSE	Breaker close			
	BREAKER OPEN	Breaker open			
	ALARM RESET	Alarm reset			
	IDLE STATUS	IDLE run			
	GEN VOLTAGE CHANGE	Voltage change by generator wiring			
	BUZZER STOP	Stop buzzer operation			
	USER TIMER INPUT	On / Off delay signal		0~999.9[s]	
Fire Fighting Contact	LOAD CUT	simultaneously block		Impossible	
	FIRE RUN	Entering fire mode			
	FIRE RUN OFF	Disabling fire mode			
	FIRE TEST	Entering fire test			
	FIRE TEST UP	Virtual increase in fire			
	FIRE TEST DOWN	Virtual decrease in fire			

- When using EP20, additional contact input setup is possible as shown below.

Menus that are influenced	Setup	Description
[SYSTEM] → [EXT-MODULE]	EP20	When using EP20
[DI-CONFIG] → From [DI 11 SET]	Relevant contact	Oil Press S/W LH
		Oil Press S/W RH
		Coolant S/W LH
		Coolant S/W RH
		Oil temp S/W

10.1. USER FAULT

- Used as user fault contact.

- When contact is input, operation mode of Gen-set will switch according to set alarm level after set delay time.

- Alarm message can be revised.

- Setup : TYPE(N/O, N/C), DELAY(0.0 ~ 25.0[s]), ALARM LEVEL(7level), MESSAGE(TEXT)

10.2. USER FAULT(RUN)

- Used as user fault contact in [RUN].

- When contact is input, operation mode of Gen-set will switch according to set alarm level after set delay time.

- Alarm message can be revised.

- Setup : TYPE(N/O, N/C), DELAY(0.0 ~ 25.0[s]), ALARM LEVEL(7level), MESSAGE(TEXT)

10.3. USER FAULT(STOP)

- Used as user fault contact in [READY].

- When contact is input, operation mode of Gen-set will switch according to set alarm level after set delay time.

- Alarm message can be revised.

- Setup : TYPE(N/O, N/C), DELAY(0.0 ~ 25.0[s]), ALARM LEVEL(7level), MESSAGE(TEXT)

10.4. EM'CY STOP S/W

- Used as Emergency stop switch contact.

- When contact is input, Gen-set will shut down.

- Setup : TYPE(N/O, N/C), DELAY(0.0 ~ 25.0[s]), ALARM LEVEL(7level), MESSAGE(TEXT)

10.5. COOLANT TEMP S/W

- Used as coolant switch contact.

- When contact is input, operation mode of Gen-set will switch according to set alarm level after set delay time.

- If coolant high temp occurs in [BUILD-UP] or [RUN] or [COOLDOWN], then [F_COOLANT TEMP HIGH] Alarm will output.

- Setup : TYPE(N/O, N/C), DELAY(0.0 ~ 25.0[s]), ALARM LEVEL(7level)

10.6. OIL PRESS S/W

- Used as oil press switch contact.

- When contact is input, operation mode of Gen-set will switch according to set warning level after set delay time.

- If Coolant High Temp occurs in [BUILD-UP] or [RUN] or [COOLDOWN], then [F_OIL PRESS LOW] Alarm will output.

- Setup : TYPE(N/O, N/C), DELAY(0.0 ~ 25.0[s]), ALARM LEVEL(7level)

10.7. COOLANT LEVEL S/W

- Used as coolant level switch contact.

- When contact is input, operation mode of Gen-set will switch according to set Alarm level after set delay time.

- Setup : TYPE(N/O, N/C), DELAY(0.0 ~ 25.0[s]), ALARM LEVEL(7level)

10.8. NO CHARGING S/W

- Used as battery charging failure contact.

- When contact is input, operation mode of Gen-set will switch according to set warning level after set delay time.

- Only detects in [RUN].

- Setup : TYPE(N/O, N/C), DELAY(0.0 ~ 25.0[s]), ALARM LEVEL(7level)

10.9. FAIL TO START

- Used as start failure contact.

- When contact is input, operation mode of Gen-set will switch according to set warning level after set delay time.

- Setup : TYPE(N/O, N/C), DELAY(0.0 ~ 25.0[s]), ALARM LEVEL(7level)

10.10. FAIL TO STOP

- Used as stop failure contact.
- When contact is input, operation mode of Gen-set will switch according to set warning level after set delay time.
- Setup : TYPE(N/O, N/C), DELAY(0.0 ~ 25.0[s]), ALARM LEVEL(7level)

10.11. BUILD-UP EXPIRE

- Used as fail to build-up contact.
- When contact is input, operation mode of Gen-set will switch according to set warning level after set delay time.
- Setup : TYPE(N/O, N/C), DELAY(0.0 ~ 25.0[s]), ALARM LEVEL(7level)

10.12. OVER SPEED

- Used as over speed contact.
- When contact is input, operation mode of Gen-set will switch according to set warning level after set delay time.
- Setup : TYPE(N/O, N/C), DELAY(0.0 ~ 25.0[s]), ALARM LEVEL(7level)

10.13. OCGR

- Used as OCGR contact.
- When contact is input, operation mode of Gen-set will switch according to set warning level after set delay time.
- Setup : TYPE(N/O, N/C), DELAY(0.0 ~ 25.0[s]), ALARM LEVEL(7level)

10.14. BREAKER AUX

- Used as breaker auxiliary contact.
- Setup : TYPE(N/O, N/C),

Menus that are influenced	Setup	Description
[SYSTEM] → [BREAKER AUX]	[USE]	Use of breaker aux

10.15. UVR SIGNAL

- Used as start contact in [AUTO] mode.

- When contact is input, Gen-set will start and when contact is not input, Gen-set will stop.

- Setup : TYPE(N/O, N/C),

Menus that are influenced	Setup	Description
[CONTROL] → [MAINS SENSING]	[UVR Contact]	User set DI port
[CONTROL] → [MAINS SENSING]] → [AUTO-START DELAY]	0~7200 [s]	Start delay time in [AUTO] mode
[CONTROL] → [MAINS SENSING]→ [AUTO-START VOLTAGE]	0~6600 [Vac]	Start voltage in [AUTO] mode.
[CONTROL] → [MAINS SENSING] → [AUTO-STOP DELAY]	0~7200 [s]	Stop delay time in [AUTO] mode
[CONTROL] → [MAINS SENSING]→ [AUTO-STOP VOLTAGE]	0~6600 [Vac]	Stop Voltage in [AUTO] mode

10.16. FIRE-RUN

- Used as emergency-run contact.

- When contact is input, operation status will switch to [FIRE] mode, and after 5[s] of [PRE-CRANK]

  delay time, Gen-set will start.

- Operation status will be same as [AUTO] mode.

- Setup : TYPE(N/O, N/C),

10.17. BLOCK

- Used as block mode contact.

- When contact is input, operation status will switch to [BLOCK] mode.

- Setup : TYPE(N/O, N/C),

10.18. MANUAL

- Used as manual mode contact.

- When contact is input, operation status will switch to [MANUAL] mode.

- Setup : TYPE(N/O, N/C),

10.19. AUTO

- Used as auto mode contact.

- When contact is input, operation status will switch to [AUTO] mode.

- Setup : TYPE(N/O, N/C),

10.20. GEN START

‐ Used as Gen‐set start contact.

‐ Gen‐set will start when contact is input in [MANUAL], [READY].

‐ Gen‐set will not stop even if contact is open after start.

‐ Setup : TYPE(N/O, N/C),

10.21. GEN STOP

‐ Used as Gen‐set stop contact.

‐ Gen‐set will stop when contact is input in [MANUAL] mode.

　Gen‐set will not run even if contact is open after stop.

‐ Setup : TYPE(N/O, N/C),

10.22. BREAKER CLOSE

‐ Used as breaker close contact.

‐ If it is not breaker trip alarm situation in [RUN] of [MANUAL] mode, breaker will close when signal
　is input.

‐ Breaker will close in [AUTO], [SCHEDULED‐RUN], [SCHEDULED‐RUN ACB CONTROL‐MANUAL]
　when signal is input.

‐ Setup : TYPE(N/O, N/C),

Menus that are influenced	Setup	Description
[CONTROL] → [SCHEDULED‐RUN ACB CONTROL]	[MANUAL]	ACB manual control in scheduled‐run

10.23. BREAKER OPEN

‐ Used as breaker open contact.

‐ Breaker will open in [MANUAL], [RUN], [COOLDOWN], [STOP] when signal is input.

‐ Breaker will open in [AUTO], [SCHEDULED‐RUN], [SCHEDULED‐RUN ACB CONTROL‐MANUAL]
　when signal is input.

‐ Setup : TYPE(N/O, N/C)

Menus that are influenced	Setup	Description
[CONTROL] → [SCHEDULED‐RUN ACB CONTROL]	[MANUAL]	ACB manual control in scheduled‐run

10.24. ALARM RESET

- Used as Alarm reset contact.

- When Alarm occurs and is released, Alarm status will be initialized when signal is input.

- When Alarm occurs and is not released, only Alarm Horn will be initialized when signal is input.

- Setup : TYPE(N/O, N/C),

10.25. IDLE RUN

- Used as IDLE contact.

- Operation status will switch to [IDLE] when contact is input.

- Setup : TYPE(N/O, N/C)

10.26. GEN VOLTAGE CHANGE

- Used as generator voltage change contact.

- It changes to the voltage state, when contact is input after changing the generator wiring.

   (ex) 380V -〉220V / 440V -〉380V

- Setup : TYPE(N/O, N/C)

10.27. BUZZER STOP

- Used as buzzer stop contact.

- The buzzer sound stops immediately, when the contact is input.

- Setup : TYPE(N/O, N/C)

10.28. USER TIMER INPUT

- Used as user timer start contact.

- When the contact is applied, the set user timer is operated, and when the operation is completed,

   the set relay is output.

- After the set time, it is turned ON/OFF as a user timer relay.

     (User timer ON/OFF delay setting: 0.0~999.0 sec)

- Setup : TYPE(N/O, N/C)

REV. F

10.29. LOAD CUT

- Used as a [LOAD CUT] state input contact.

- Setup : TYPE(N/O, N/C)

영향을 받는 메뉴	설정
[fFS] → [LOAD CUT(LV3)]	0 ~ 100 [%]
[fFS] → [LV3 CHECK TIME]	0 ~ 600 [sec]
[DO-CONFIG] → [FIRE_fFS RELAY 01 ~ 68]	User setup

10.30. FIRE RUN

- Used as a [FIRE RUN] state input contact.

- Setup : TYPE(N/O, N/C)

영향을 받는 메뉴	설정
[fFS] → [fFS MODE SET]	[FIRE RUN], [FIRE RUN and/orLOAD kW]
[DO-CONFIG] → [S_FIRE RUNNING]	User setup

10.31. FIRE RUN OFF

- Used as a [FIRE RUN OFF] contact.

- Setup : TYPE(N/O, N/C)

영향을 받는 메뉴	설정
[fFS] → [fFS MODE SET]	[FIRE RUN], [FIRE RUN and/orLOAD kW]
[DO-CONFIG] → [S_FIRE RUNNING]	User setup

10.32. FIRE TEST, FIRE TEST UP and FIRE TEST DOWN

- Used for test operation of Firefighting Preservation control.

- Setup : TYPE(N/O, N/C)

- After sequentially inputting the signals below, virtual conditions are created so that the

  Firefighting Preservation control state can be tested.

입력 신호	상태
[UVR SIGNAL]	Switch to [RUNNING] state
[BREAKER AUX]	Switch to Firefighting Preservation state
[FIRE TEST]	Virtual 380 [V] is input
[FIRE TEST UP]	Current value increases with one pulse signal
[FIRE TEST DOWN]	Current value increases with one pulse signal

10.33. OIL PRESS S/W RH

- Used as right oil press switch contact when using EP20.

- [F_OIL PRESS LOW] will output when oil press low happens in [BUILD-UP], [RUN], [COOLDOWN].

- Setup : TYPE(N/O, N/C), DELAY(0.0 ~ 25.0[s]), ALARM LEVEL(7level)

10.34. COOLANT S/W LH

- Used as left coolant switch contact when using EP20.

- [F_COOLANT TEMP HIGH] will output when COOLANT temp high happens in [BUILD-UP], [RUN],
  [COOLDOWN].

- Setup : TYPE(N/O, N/C), DELAY(0.0 ~ 25.0[s]), ALARM LEVEL(7level)

10.35. COOLANT S/W RH

- Used as right coolant switch contact when using EP20.

- [F_COOLANT TEMP HIGH] will output when coolant temp high happens in [BUILD-UP],
  [RUNNING], [COOLDOWN].

- Setup : TYPE(N/O, N/C), DELAY(0.0 ~ 25.0[s]), ALARM LEVEL(7level)

10.36. OIL TEMP S/W

- Used as [C_AIR HEATER] output contact when using EP20.

- Relevant contact can only be used when using EP20.

- Setup : TYPE(N/O, N/C),

11. DO-CONFIG

- Digital Output(DO) Setup.

- Setup possible in Stop mode. (Some items excluded)

DO List	Description	DO List	Description
C_PRE-CRANK	Pre-heat	F_OVER VOLTAGE	Over voltage
C_CRANK	Start motor	F_UNDER VOLTAGE	Under voltage
C_GOVERNOR	Solenoid	F_OVER CURRENT	Over current
C_BREAKER CLOSE	Breaker close	F_OCGR	Ground over current
C_BREAKER OPEN	Breaker open	F_OVER FREQ	Over frequency
C_ALARM BUZZER	Alarm	F_UNDER FREQ	Under frequency
C_ALARM RESET	Alarm Release	F_OVER SPEED	Over speed
C_IDLE SPEED	IDLE Speed	F_UNDER SPEED	Under speed
C_RATED SPEED	Rated Speed	F_FAIL TO START	Start failure
C_AIRHEATER	Air Heater	F_FAIL TO STOP	Stop failure
C_USER TIMER	User Timer	F_FAIL TO BUILD-UP	Build-up failure
		F_COOLANT TEMP HIGH	Coolant high temp
S_MAINS ON	Mains on status	F_COOLANT TEMP LOW	Coolant low temp
S_MAINS OFF	Mains off status	F_OIL PRESS HIGH	Oil high press
S_GEN START	Gen-set start	F_OIL PRESS LOW	Oil low press
S_GEN RUNNING	[RUN] status	F_OIL TEMP HIGH	Oil high temp
S_BLOCK MODE	[BLOCK] mode	F_OIL TEMP LOW	Oil low temp
S_MANUAL MODE	[MANUAL] mode	F_USER TEMP HIGH	User temp high
S_AUTO MODE	[AUTO] mode	F_USER TEMP LOW	User temp low
S_FIRE-RUN MODE	[FIRE] mode	F_FUEL LEVEL HIGH	Fuel level high
S_ALL ALARM	All Alarm	F_FUEL LEVEL LOW	Fuel level low
S_WARNING	Warning	F_BAT VOLT HIGH	Battery voltage high
S_HEAVY FAULT	SHT, TRIP+STOP	F_BAT VOLT LOW	Battery voltage low
S_TRIP FAULT	TRIP	F_USER PRESS HIGH	User press high
S_STOP FAULT	STOP	F_USER PRESS LOW	User press low
S_SHUTDOWN FAULT	SHT	F_COOLANT LEVEL LOW	Coolant level low
S_FUEL LEVEL	Fuel level	F_USER FAULT 1~10	User fault contact
S_FIRE RUNNING	Firefighting state	FIRE_fFS RELAY 01~72	Firefighting relay

- When using EP20, additional contact input setup possible as shown below.

Menus that are influenced	Setup	Description
[SYSTEM] → [EXT-MODULE]	EP20-1	When using EP20-1
[DO-CONFIG] → From [DO 09 SET]	Relevant contact	C_AIR HEATER

※ Only applicable in EP20

11.1. C_PRE-CRANK

- Used as output contact when pre-heating is needed in [PRE-CRANK] status.

- If Gen-set start signal is input in [READY], [C_CRANK] is output during [PRE-CRANK TIME] then status will switch to [CRANK-ON].

Menus that are influenced	Setup	Description
[CONTROL] → [PRE-CRANK TIME]	0 ~ 60[s]	[C_PRE-CRANK] will output during set time
〈 [C_PRE-CRANK] output according to operation mode 〉

11.2. C_CRANK

- Used as start motor output contact in [CRANK-ON] status.

Menus that are influenced	Setup	Description
[CONTROL] → [CRANK-ON TIME]	1 ~ 9[s]	[C_CRANK] will output during set time
〈 [C_CRANK] output according to operation mode 〉

11.3. C_GOVERNOR

- Used as governor output contact.

Menus that are influenced	Setup	Description
[SYSTEM] → [RPM] → [GOVERNOR TYPE]	FUEL, STOP	Refer to picture shown below
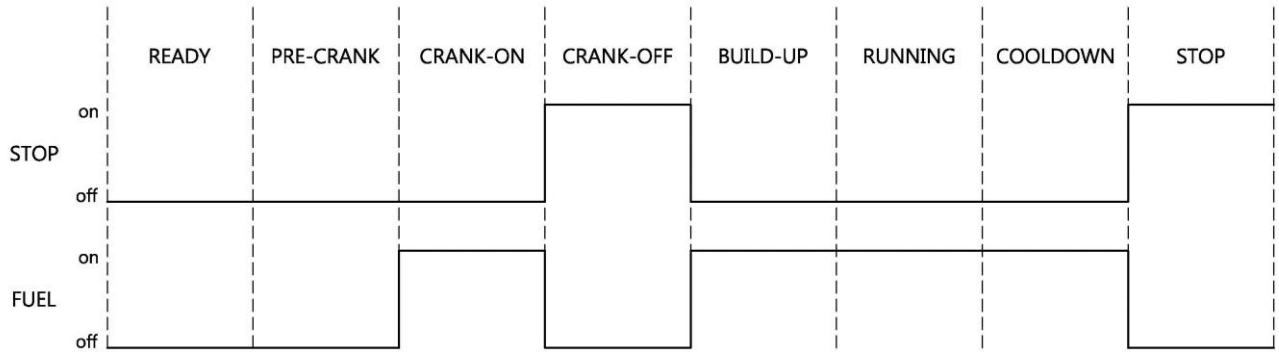

〈 [C_GOVERNOR] output according to operation status 〉

11.4. C_BREAKER CLOSE

- Used as Breaker Close output contact in [RUN] when status is not BREAKER TRIP ALARM.

- If [BREAKER TYPE] is ACB in [MANUAL] mode, press [CLOSE] to activate.

- If [BREAKER TYPE] is ACB in [AUTO] or [FIRE], Breaker Close contact will output after set delay time.

- Will output according to setup of [SCHEDULED-RUN ACB CONTROL] in [SCHEDULED-RUN].

Menus that are influenced	Setup	Description
[CONTROL] → [BREAKER TYPE]	ACB	Breaker Close output
[CONTROL] → [ACB CLOSE DELAY TIME]	0~60[s]	Close contact output after set time
[CONTROL] → [SCHEDULED-RUN]	Use	Setup scheduled-run
[CONTROL] → [SCHEDULED-RUN] → [SCHEDULED-RUN ACB CONTROL]	Manual, Auto	Setup control method of scheduled-run ACB

11.5. C_BREAKER OPEN

- Used as breaker open output contact in [RUN], [COOLDOWN], [STOP]. (Holding time for 2[s])

- Press [OPEN] to activate in [MANUAL] mode.

- Breaker Open contact will output automatically in [AUTO] or [FIRE].

- Output can be setup in [AUTO] or [MANUAL] mode according to [SCHEDULED-RUN ACB CONTROL] in [SCHEDULED-RUN] status.

- If Breaker type is MCCB, Breaker Open contact will output only in Breaker Trip Alarm.

     REV. F

Menus that are influenced	Setup	Description
[CONTROL] → [SCHEDULED-RUN]	Use	Setup scheduled-run
[CONTROL] → [SCHEDULED-RUN]→ [SCHEDULED-RUN ACB CONTROL]	MANUAL, AUTO	Setup scheduled-run ACB control method
[CONTROL] → [BREAKER TYPE]	MCCB	Use MCCB

11.6. C_ALARM BUZZER

- Used as Alarm Buzzer output contact when Warning, Trip, Shut down occurs.

- When Alarm occurs, contact will output during [ALARM HORN TIME], and when it is set as 0,

  Alarm Reset is only possible manually.

Menus that are influenced	Setup	Description
[SYSTEM] → [BUTTON BEEP] → [ALARM HORN TIME]	0 ~ 600 [s]	Contact output during set time

11.7. C_ALARM RESET

- Used as alarm reset contact.

- Signal will output during input of [ALARM RESET] or during activation of [RESET] button.

11.8. C_IDLE SPEED

- Used as IDLE speed output contact

- If [IDLE RUN] is input, contact output will continue regardless of Run status.

- If [IDLE RUN] is not input, contact will output during set [IDLE TIME].

Menus that are influenced	Setup	Description
[DI-CONFIG] → [IDLE RUN]	Use	Contact output during [IDLE RUN] input
[CONTROL] → [IDLE TIME]	0 ~ 60 [s]	Contact output during set time

11.9. C_RATED SPEED

- Used as rated speed output contact.

- If [IDLE TIME] is not 0 in [BUILD-UP] status, [C_IDLE SPEED] will output, and if [IDLE TIME] is 0,

  [C_RATED SPEED] will output.
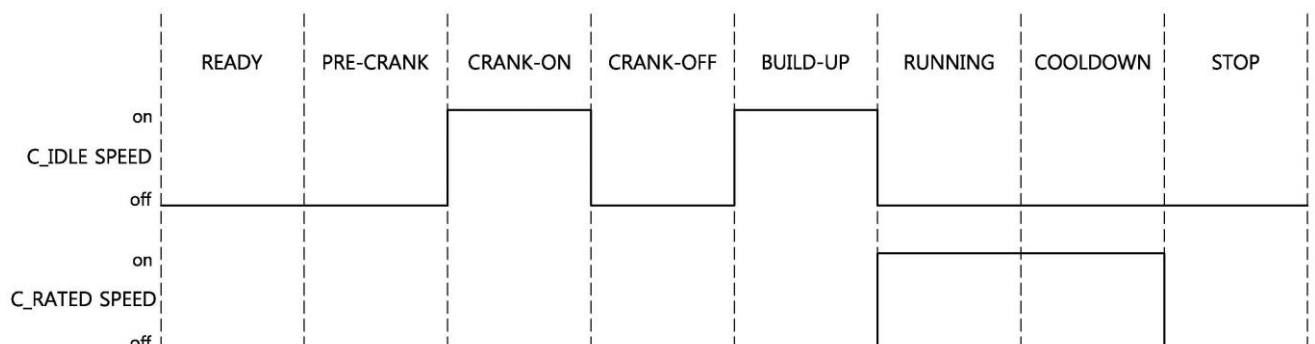

〈 [C_IDLE SPEED], [C_RATED SPEED] output according to Gen-set status 〉

REV. F

11.10. C_AIR HEATER

- Used as output contact when using Air-heater in [BUILD-UP].

- When using EP20, use of relevant contact is only available in EP20.

- After setup of Air Heater in [CONTROL], setup relevant output contact in [DO-CONFIG].

- If oil temp is lower than [OIL TEMP SWITCH] input status or set [A/H OPERATED TEMP], relevant contact will output in [BUILD-UP] status.

- Once it is output, holding time will be as set [A/H OPERATED TIME].

- Output will occur only once during Running of Gen-set and then will output again when Gen-set re-starts.

Menus that are influenced	Setup	Description
[CONTROL] → [EXT-MODULE]	EP20	When using EP20
[DO-CONFIG] → From [DO 09 SET]	Relevant contact	Only applicable in EP20
[CONTROL] → [A/H INPUT TYPE]	Use/ Not use	Not use, switch, sensor, switch+sensor
[CONTROL] → [A/H OPERATED TEMP]	Run temp	Digital output in temp below set temp
[CONTROL] → [A/H OPERATED TIME]	Run time	Output holding time

11.11. C_USER TIMER

- Used as output contact when using Air-heater in [BUILD-UP].

- It turns ON after as much as the ON delay time set by the User timer ON signal has elapsed.
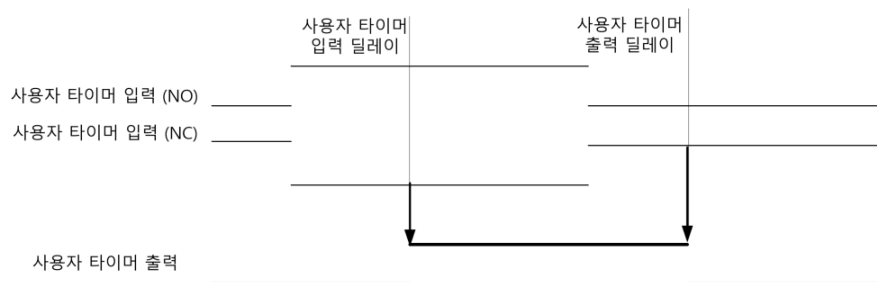

11.12. S_MAINS ON

- Used as Mains On output.

11.13. S_MAINS OFF

- Used as Mains off output.

11.14. S_GEN START

- Used as Gen-set start output.
〈 [S_GEN START] output according to status of Gen-set 〉

11.15. S_GEN RUNNING

- Used as Gen-set running output.
〈 [S_GEN RUNNING] output according to Gen-set status 〉

11.16. S_BLOCK MODE, S_MANUAL MODE, S_AUTO MODE, S_FIRE-RUN

- Used as output contact of each mode.

11.17. S_ALL ALARM, S_WARNING, S_HEAVY FAULT, S_TRIP FAULT, S_STOP FAULT, S_SHUTDOWN FAULT

- Used as output contact of each Alarm status.
- Output will stop when Alarm is released.

11.18. S_FUEL LEVEL

- Used as status output contact during firefighting operation.

11.19. S_FIRE RUNNING

- Used as gen-set fuel level status output contact.

11.20. Alarm Status

- Used as output contact of each Alarm status.

- Output will stop when Alarm is released.

- Setup of OVR, UVR, OCR, OCGR, OFR, UFR, OSR, USR, FAIL to start, FAIL to stop, FAIL to build-up, CT high, CT low, OP high, OP low, OT high, OT low, UT high, UT low, FL high, FL low, BAT VOLT high, BAT VOLT low, USER PRESS high, USER PRESS low, COOLANT LEVEL low

11.21. Alarm Contacts1~10

- Used as Alarm contact of User Fault.

- Output will stop when User Fault is released.

11.22. FIRE_fFS RELAY 01~72

- Used as a fire firefighting output contact.

12. CONTROL

- Setup Gen-set operation status.

Items		Description	Setup
MAINS SENSING	TYPE	Setup Mains Sensing method	R-S, R-S-T , UVR
AUTO-START DELAY	T1	Auto-Start delay time when Mains Off	0 ~ 7200 [s]
AUTO-STOP DELAY	T2	Auto-Stop delay time when Mains On	0 ~ 7200 [s]
AUTO-START VOLTAGE	V1	Setup voltage level to recognize as Mains off when Mains Sensing is 'MAIN R-S' or 'MAIN R-S-T'	0 ~6600 [V]
AUTO-STOP VOLTAGE	V2	Setup voltage level to recognize as Mains On when Mains Sensing is 'MAIN R-S' or 'MAIN R-S-T'	0 ~ 6600 [V]
SCHEDULED-RUN	TYPE	Setup use/not use and using method of Scheduled-Run	Not use, date, day
SCHEDULED -RUN SETUP	SETUP	Setup date when Scheduled-Run is [DATE] Setup day when Scheduled-Run is [DAY]	1 ~ 31 Mon ~ Sun
SCHEDULED -RUN ACB	CB	Setup ACB control type in Scheduled-Run	Manual, Auto
SCHEDULED -RUN START	ON	Setup start time of Scheduled-Run	00:00 ~ 23:59
SCHEDULED -RUN STOP	OFF	Setup stop time of Scheduled-Run	00:00 ~ 23:59
PRE-CRANK TIME	PRE	Relay output time of Pre-Crank	0 ~ 60 [s]
CRANK-ON TIME	ON	Crank max output time	1 ~ 99 [s]
CRANK-OFF TIME	OFF	Delay time until next crank when repeating	5 ~ 60 [s]
CRANK ATTEMPTS	REPEAT	Number of Crank repeat in AUTO Mode	1 ~ 9
GOV DELAY	GOV	Delay time of [C_GOVERNOR] output after [C_CRANK] output	-60 ~ +60 [s]
CRANK ON CHECK TIME	CHECK	Check time if Run-state is completed	1 ~ 99 [s]
RUN-STATE RPM	RPM	RPM to check engine crank No check when set to 0 (initial value 400)	100 ~ 1200 [rpm]
RUN-STATE OP-GAUGE	OPG	Oil press to check engine crank No check when set to 0	0.0 ~ 16.0 [bar]
RUN-STATE OP-SWITCH	OPS	Use/Not use of oil press switch to check engine crank	Use, Not use
OIL PRESS DEAD-TIME	OPDT	Delay time of oil press low protection after engine crank	0 ~ 30 [s]
IDLE TIME	IDLE	Setup time for IDLE-RUN IDLE Relay will output during set time	0 ~ 600 [s]
BUILD-UP EXPIRE	BUILD-UP	If voltage, frequency, and RPM don't build-up within set time after cranking, Build-up Failure fault will occur	5 ~ 600 [s]

REV. F

Items		Description	Setup
ACB CLOSE DELAY	CLOSE	ACB Close delay time in AUTO Mode	0 ~ 60 [s]
COOLDOWN TIME	COOLDOWN	Setup cooldown time in AUTO Mode	0 ~ 600 [s]
STOP-HOLD TIME	STOP	Stop signal holding time	0 ~ 600 [s]
A/H INPUT TYPE	TYPE	[C_AIR HEATER] setup of use/not use and operation method	Not used, sensor, switch, sensor+switch
A/H OPERATED TEMP	TEMP	[C_AIR HEATER] output in temp lower than set value	0 ~ 99 [℃]
A/H OPERATED TIME	TIME	[C_AIR HEATER] output holding time	0 ~ 180 [s]

13. PROTECTION

- Setup of Protection during Running or Stop.

- Setup impossible during running.

- In case of OVR, OCR, and OCGR, Constant and Inverse will operate at the same time.

  Duplicate operation in Instant setup.

Items		Description	Setup
OVR	CONSTANT	Start from over voltage level	0.5 ~ 20.0 [s]
	INVERSE	Start from over voltage level	Refer to Inverse Characteristics Curve
	INSTANT	Start from over voltage level	Within 200ms (The higher the input voltage, time will decrease)
OCR	CONSTANT	Start from over current level	0.5 ~ 20.0 [s]
	INVERSE	Start from over current level	Refer to Inverse Characteristics Curve
	SET	Start from 200% of rated current	Within 200ms (The higher the input current, time will decrease)
OCGR	CONSTANT	Start from ground over current level	0.5 ~ 20.0 [s]
	INVERSE	Start from ground over current level	Refer to Inverse Characteristics Curve
	SET	Start from 200% of ground current level	Within 200ms (The higher the input current, time will decrease)
OVR	CONSTANT	Start from over voltage level	0.5 ~ 20.0 [s]
	INVERSE	Start from over voltage level	Refer to Inverse Characteristics Curve
	INSTANT	Start from over voltage level	Within 200ms (The higher the input voltage, time will decrease)

REV. F

Items		Description	Setup	
OCR	CONSTANT	Start from over current level	0.5 ~ 20.0 [s]	
	INVERSE	Start from over current level	Refer to Inverse Characteristics Curve

14. SERIAL COMM

- NeoGCP g7 FIRE has 2 comm ports.

- Setup of D-SUB 9pin is fixed as UART communication port.

Items		Description	Setup
UART ID	ID	Setup device ID for UART port	002
UART BAUD RATE	BAUD	Setup Baud Rate for UART port	9600
UART PARITY	PARITY	Setup Parity for UART port	EVEN

- RS485 ± setup through port number [12], [13] are as shown below.

Items		Description	Setup
RS485 ID	ID	Setup device ID for RS485	0 ~ 255
RS485 BAUD RATE	BAUD	Setup Baud rate for RS485 port	9600, 19200, 38400
RS485 PARITY	PARITY	Setup Parity for RS485 port	NONE, EVEN, ODD
RS485 PROTOCOL	PROTOCOL	Setup RS485 protocol	MODBUS, GIMAC-II Plus
RS485 WORD SWAP	SWAP	If RS485 protocol is GIMAC-II Plus, select WORD SWAP use/not use	Use, Not use

15. GAIN-SET

- If actual voltage and current values are different from displayed voltage and current values, change of value is possible by changing Gain setup.

Items		Description	Setup
PT U-V GAIN	PT-UV	Gain for Gen U-V Voltage	0.001 ~ 9.999
PT V-W GAIN	PT-VW	Gain for Gen V-W Voltage	0.001 ~ 9.999
PT W-U GAIN	PT-WU	Gain for Gen W-U Voltage	0.001 ~ 9.999
CT U GAIN	CT-U	Gain for Gen U Current	0.001 ~ 9.999
CT V GAIN	CT-V	Gain for Gen V Current	0.001 ~ 9.999
CT W GAIN	CT-W	Gain for Gen W Current	0.001 ~ 9.999
CT GR GAIN	CT-GR	Gain for Gen Ground Current	0.001 ~ 9.999
MAIN R-S GAIN	MAIN-RS	Gain for Main R-S Voltage	0.001 ~ 9.999
MAIN S-T GAIN	MAIN-ST	Gain for Main S-T Voltage	0.001 ~ 9.999
BAT VOLT GAIN	BAT-V	Gain for Battery Voltage	0.001 ~ 9.999
CT U OFFSET	CT-U	Offset for Gen U Current	0 ~ 100
CT V OFFSET	CT-V	Offset for Gen V Current	0 ~ 100
CT W OFFSET	CT-W	Offset for Gen W Current	0 ~ 100
CT GR OFFSET	CT-GR	Offset for Gen GR Current	0 ~ 100
Filter	F	Filtering for Gen-set Current variability	0 ~ 100
CT U SUB GAIN※	CT-U	Sub gain for Gen U Current	-200 ~ +200
CT V SUB GAIN※	CT-V	Sub gain for Gen V Current	-200 ~ +200
CT W SUB GAIN※	CT-W	Sub gain for Gen W Current	-200 ~ +200
CT GR SUB GAIN※	CT-GR	Sub gain for Gen GR Current	-200 ~ +200

※ The method of compensating gen-set current error according to the load :

- In NeoGCP g7 FIRE, gen-set current gain is set at 30% of the load, and if an error occurs depending on the size of the load, you can adjust the sub gain. It is 0 when shipped from the factory.

[Caution] If you want to change the current gain, you must set the sub-gain to 0.

16. PROTECTION TEST

- Test setup can be changed in [PROTECTION].

Items	Description	Setup
OVER VOLTAGE TEST	200% of rated voltage at start-up	
UNDER VOLTAGE TEST	–	
OVER CURRENT TEST	200% of rated current at start-up	
OCGR TEST	200% of OCGR at start-up	
OVER SPEED TEST	–	Change in [PROTECTION]
OIL PRESS S/W TEST	Suggested to check actual wiring	
COOLANT S/W TEST	Suggested to check actual wiring	
COOLANT TEMP HIGH TEST	–	
OIL PRESS LOW TEST	–	

17. HISTORY

- Alarm History check is possible only in [BLOCK] mode.

- Check up to 30 Gen-set operation information in sequence in case of alarm history, cranking output

  history and alarm occurrence.

- Start motor ON/OFF record stored in ALARM HISTORY.

18. Fault Items

18.1. Generator Related Fault Items

Items	Alarm Level					Delay Time	Sequence applied
	Not use	Warning	Trip	Stop	Shutdown		
OVR	○	○	○	○	○	Setup	Always
	Gen Voltage detected higher than set value						
UVR	○	○	○	○	○	Setup	Running
	Gen Voltage detected lower than set value						
OCR	○	○	○	○	○	Setup	Always
	Gen Current detected higher than set value						
OCGR	○	○	○	○	○	Setup	Always
	Gen Ground Current detected higher than set value OCGR input						
OFR	○	○	○	○	○	Setup	Always
	Gen Frequency detected higher than set value						
UFR	○	○	○	○	○	Setup	Running
	Gen Frequency detected lower than set value						
FAIL TO BUILD-UP			◎		◎	0[s]	Build-Up
	Voltage, frequency, and RPM don't build-up within the normal range during the gen-set delay time for build-up after cranking.						
GEN BREAKER FAILURE		◎				0[s]	Always
	When Breaker Close output occurs and then Breaker Aux contact is not input						
SHORT CIRCUIT					◎	0[s]	Always
	Gen Current detected higher than short circuit level						

◎ : Fixed item ○ : Optional item

18.2. Engine Related Fault Items

Items	Alarm Level					Delay Time	Sequence applied
	Not use	Warning	Trip	Stop	Shutdown		
OVER SPEED	○	○	○	○	○	Setup	Always
	RPM detected higher than set value						
UNDER SPEED	○	○	○	○	○	Setup	RUNNING
	RPM detected lower than set value						
EM'CY STOP			◎		◎	0 [s]	Always
	Emergency Stop input						
FAIL TO START			◎		◎	0 [s]	CRANK-ON
	Crank Attempts expire in Auto Mode & Fire-Run Mode						
FAIL TO STOP			◎		◎	2 [s]	PRE-CRANK
	Fail to Stop input						
FAIL TO STOP(RPM)	○	○	○	○	○	2 [s]	PRE-CRANK
	RPM detected higher than RUN-STATE RPM						
FAIL TO STOP(OP GAUGE)	○	○	○	○	○	2 [s]	PRE-CRANK
	Oil Pressure detected higher than RUN-STATE OP-GAUGE						
FAIL TO STOP(OP SWITCH)	○	○	○	○	○	2 [s]	PRE-CRANK
	No input of Oil Pressure S/W						
COOLANT TEMP S/W	○	○	○	○	○	Setup	BUILD-UP ~ COOLDOWN
	Coolant Temp S/W input						
OIL PRESS S/W	○	○	○	○	○	Setup	BUILD-UP ~ COOLDOWN
	Oil Press S/W input						
NO CHARGING S/W	○	○	○	○	○	Setup	RUNNING
	No Charging S/W input						
COOLANT LEVEL S/W	○	○	○	○	○	Setup	Always
	Coolant Level S/W input						
BAT VOLTAGE HIGH	○	○	○	○	○	10 [s]	Always
	Battery Voltage detected higher than set value.						
BAT VOLTAGE LOW	○	○	○	○	○	10 [s]	Always
	Battery Voltage detected lower than set value.						
MPU FAILURE		◎				5 [s]	BUILD-UP ~ COOLDOWN
	When using RPM measurement method as MPU and RPM is detected 0						

◎ : Fixed item　○ : Optional item

35	kvar Hour [kvarh]	32Bit FLOAT	

REV. F

Note6) BIT FIELD

BIT	01	02	03
0	OVR	Gen-set start	–
1	UVR	Auto Mode	–
2	OCR	–	–
3	OCGR	–	–
4	OSR	Breaker open Output	–
5	Coolant Temp High	Breaker close output	–
6	Oil Press Low	Breaker open contact input	–
7	Fail to Start, Fail to Stop	Breaker close contact input	–
8	DI 3 Input Alarm	DO 1 Output	Sys Error – Breaker aux alarm, Low battery voltage
9	DI 4 Input Alarm	DO 2 Output	Alarm – Setup when alarm occurs
10	DI 5 Input Alarm	DO 3 Output	Event – Not use
11	DI 6 Input Alarm	DO 4 Output	–
12	DI 7 Input Alarm	DO 5 Output	Remote / Local – Not use
13	DI 8 Input Alarm	DO 6 Output	–
14	DI 9 Input Alarm	DO 7 Output	–
15	DI 10 Input Alarm	DO 8 Output	Setup when using SWAP SET – WORD SWAP

19.2.2. CONTROL (05h)

ADDRESS	DATA	VALUE
0002	BREAKER CLOSE	0xFF00
0004	BREAKER OPEN	
0006	START	
0010	STOP	
0014	BREAKER CLOSE	
0018	BREAKER OPEN	
0022	BLOCK MODE	
0026	MANUAL MODE	
0030	AUTO MODE	
0034	ALARM RELEASE	

REV. F

20. Inverse Characteristics Curve

Inverse Characteristics Curve
- Applicable range : OVR, OCR, OCGR

- X axis : Input value / Setup value

- Y axis : Running time(s)

- Lever setup value : 0.05~1.00

- Equation for trip time,

$$Inverse\ Time(s) = \frac{0.14}{(Input\ Value/Set\ Value)^{0.02} - 1} \times Lever$$

REV. F
